HOW IT WORKS

The conveyor is divided into accumulation zones. Each zone extracts power from a flat drive belt that runs the entire length of the conveyor. The drive belt is pneumatically lowered away from the tread rollers, causing product in that zone to stop. Hytrol's EZLogic® Zone Controllers sense product presence and control the accumulation and release of product from the zones.

EZLOGIC™ ACCUMULATION SYSTEM

Hytrol's EZLogic™, or "Electronic Zero-pressure Logic" Accumulation System, combines the sensing accuracy of photo-electronics with discrete electronic logic control without the use of a PLC or pneumatic logic components. The EZLogic™ Accumulation System provides many features including:

Zero-Pressure Accumulation of Product
Zone Stop function is built in. Any zone may be transformed into a workstation by connecting a dry contact switching device to the auxiliary port of the EZLogic™ Zone Controller. This feature is always used at the discharge end of the conveyor line, and may be used at any other location where a zone stop is required.

Selectable Modes of Operation
Singulation Mode—Product separates while traveling down the conveyor and when it is released from the conveyor - creating a zone-length gap between products.

Enhanced Slug Mode w/ Jam Protection—Product does not separate when traveling down the conveyor or when it is released from the conveyor. This allows higher product throughput at any given conveyor speed. Product will not separate on the conveyor even when accumulation has been activated at the discharge end.

Cascaded Slug Release—Rather than releasing all zones simultaneously, this function introduces a momentary delay in the release of each zone, from discharge upstream.

Dynamic Zone Allocation—Automatically adjusts the conveyor's zone length to accommodate the length of the product being conveyed. Improves conveyor efficiency and system flexibility.

ACCUMULATION ZONES—12, 18, 24, 30 and 36 in. long air controlled. Includes 4 brake rollers to stop package. Section lengths change with zone lengths. (See **Note** opposite page). **Note:** 51 or more zones will require an additional IOP, isolation cable and power supply T cable.

EZLogic™ ZONE CONTROLLER—Located in each zone. (Retro-reflective). NEMA 1, 2, IP 62. UL Approved.

IOP—Provides 27VDC, 100 watt power for EZLogic™ accumulation system - contains slots for 4 input/output boards. Operates up to 50 zones (25 each side of IOP). Requires 120VAC or 230VAC single phase input.

AIR REQUIREMENTS—Recommended working pressure 35 P.S.I. Free air consumption at 35 P.S.I.—.003 cu. ft. per sensor actuation.

FILTER, REGULATOR—One filter/regulator is supplied for the main air supply line. (¾ inch NPT port). Main air from compressor should be supplied to each filter/regulator.

SPEED REDUCTION—Sealed worm gear C-Face speed reducer. No. 50 roller chain to drive shaft.

MOTOR—½ HP—208/230/460/575V—3 Ph. 60 Hz. Totally Enclosed C-Face.

CONVEYING SPEED—Constant 65 FPM.

CAPACITY—Maximum load per linear foot of conveyor 75 lbs. Total load NOT TO EXCEED capacity in charts.

FLOOR SUPPORTS—Now supplied as optional equipment.

Above load charts are based on singulated operational mode (50% max load flowing). If operated in cascade release mode, the length or load must be decreased appropriately. Example: For full slug: reduce load by 50% or reduce length by 50%. For cascade release: reduce length by approximately 40% or reduce load by approximately 40%. For loads over 75 lbs per ft, 140-SD belt is required.
