

## IDEAL FOR

WireCrafters Technician Locker Systems are ideal for Distribution Centers, Lift Truck Companies, Cable Companies, Plumbing Companies, Electrical Companies, HVAC Companies, Auto Tech Centers & More.

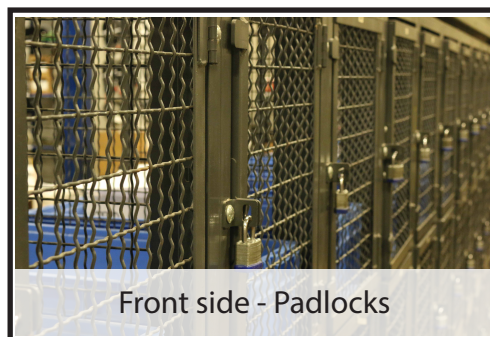

## THE SOLUTION FOR DISTRIBUTION CENTERS

This unique system allows for drivers/technicians to enter the facility in a controlled environment and have all of their parts sorted and waiting in their designated lockers. A simple pad lock can be utilized, however WireCrafters also offers a variety of locking systems in biometrics, key card readers, key pads, etc.

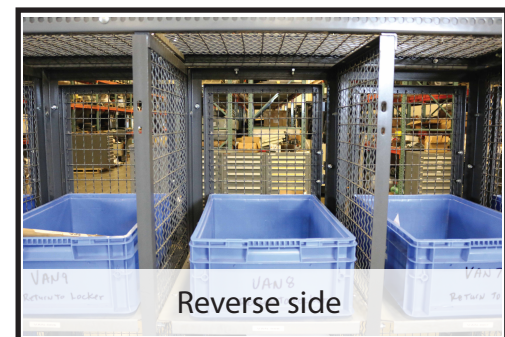

On the reverse side the parts manager can load all lockers from the inside of the WireCrafters cage system. All items stay separated and inaccessible from the technician side of the locker bay, allowing the driver/technician to only access their designated cell.
